

## HADOOP

### IMPLEMENT THE MAX TEMPERATURE MAPREDUCE PROGRAM TO

### IDENTIFY THE YEAR WISE MAXIMUM TEMPERATURE FROM

### SENSORDATA

**AIM**

To implement the Max temperature MapReduce program to identify the year-wise maximum temperature from the sensor data.

### Description

Sensors sense weather data in big text format containing station ID, year, date, time, temperature, quality etc. from each sensor and store it in a single line. Suppose thousands of data sensors are there, then we have thousands of records with no particular order. We require only a year and maximum temperature of particular quality in that year.

For example:

Input string from sensor:

0029029070999991902010720004+64333+023450

FM-12+

000599999V0202501N027819999999N0000001N9-00331+

99999098351ADDGF1029919999999999999999999

Here: 1902 is year

0033 is temperature

1 is measurement quality (Range between 0 or 1 or 4 or 5 or 9)

Here each mapper takes the input **key** as "byte offset of line" and **value** as "one weather sensor read i.e one line". and parse each line and produce an intermediate **key** "year" and **intermediate value** as "temperature of certain measurement qualities" for that year.

The combiner will form set values of temperature. Year and set of values of temperatures is given as input <key, value> to reducer and Reducer will produce year and maximum temperature for that year from the set of temperature values.

import org.apache.hadoop.mapreduce.Reducer;

//Mapper class

class MaxTemperatureMapper
extends Mapper<LongWritable, Text, Text, IntWritable> { private static final int MISSING
= 9999;

@Override
public void map(LongWritable key, Text value, Context context) throws IOException,
InterruptedException {

String line = value.toString(); String year = line.substring(15, 19); int airTemperature;
if (line.charAt(87) == '+') { // parseInt doesn't like leading plus signs airTemperature =
Integer.parseInt(line.substring(88, 92));
} else {
airTemperature = Integer.parseInt(line.substring(87, 92));
}
String quality = line.substring(92, 93);
if (airTemperature != MISSING && quality.matches("[01459]")) { context.write(new
Text(year), new IntWritable(airTemperature));
}
}
}

//Reducer class
class MaxTemperatureReducer
extends Reducer<Text, IntWritable, Text, IntWritable> {

@Override
```

NAME: HARISH R

```
public void reduce(Text key, Iterable<IntWritable> values, Context context)
throws IOException, InterruptedException {
int maxVal = Integer.MIN_VALUE; for (IntWritable value : values) {
maxVal = Math.max(maxVal, value.get());
}
context.write(key, new IntWritable(maxVal));
}
}
//Driver Class
```

```
public class MaxTemperature {
```

```
public static void main(String[] args) throws Exception { if (args.length != 2) {
System.err.println("Usage: MaxTemperature <input path=> <output path>"); System.exit(-
1);
}
```

```
Job job = Job.getInstance(new Configuration()); job.setJarByClass(MaxTemperature.class);
job.setJobName("Max temperature");
```

```
FileInputFormat.addInputPath(job, new Path(args[0])); FileOutputFormat.setOutputPath(job,
new Path(args[1]));
```

```
job.setMapperClass(MaxTemperatureMapper.class);
job.setReducerClass(MaxTemperatureReducer.class);
```

```
job.setOutputKeyClass(Text.class); job.setOutputValueClass(IntWritable.class);
```

```
job.submit();
}
}
```

## RESULT

Thus a java program has been implemented to identify the year-wise maximum temperature from the sensor data.
